dev.mkdesilva@gmail.com • 0925636342 • github.com/mkdesilva • linkedin.com/in/mkdesilva

Bangkok, Thailand

Engineering leader with 8+ years of experience across mobile and full-stack development. Architected production systems for 525k+ MAU consumer apps and 1M+ DAU banking platforms; led teams of up to 20 developers across React Native, iOS, Swift, and Node.

SKILLS

Full-Stack Development: React Native, Expo, Node.js, NestJS, MS SQL, Postgres, Swift, Flutter, ReactJS, NextJS

DevOps & Quality Assurance: Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins, Fastlane), TDD, Automated Testing, AWS, GCP

Leadership & Collaboration: Hiring, career development, performance management, agile/scrum, cross-functional stakeholder engagement

Software Architecture: Service-Oriented Architecture, Microservices, Scalable Systems Design

WORK EXPERIENCE

Ling Sep 2025 – Present
Senior Software Engineer *Bangkok, Thailand*

- Architected a path-based course progression system and a flexible curriculum decoupling architecture for a language learning platform supporting 70+ languages, solving a long-standing constraint the team considered immovable and enabling the product team to ship region-specific courses (default, Asian, Eastern European) for the first time — launched with **zero showstoppers and hotfixes** and contributing to retention reaching an all-time high of **6.43%**.
- Cut team-wide ticket rework rate from **24.6% to 8.3%** through mandatory cross-platform test video verification, root cause analysis on bug tickets, and AI-assisted code review, including root-causing a recurring class of showstopper bugs to Redux Persist's shallow reconciliation behaviour.
- Restructured the code review workflow to merge-first with QA peer review on main, cutting median merge request review cycle time from **1.2 days to 0.2 days** and eliminating environment drift through automated backend deployments on merge.
- Championed removal of the deprecated NativeBase UI framework, presenting a technical business case to the CEO and driving the migration via a team hackathon to reduce long-term technical debt.
- Drove AI adoption across the engineering team, integrating **Claude Skills** into the codebase and deepening team AI fluency through hands-on workshops.
- Owned the majority of the dev team's quarterly **OKRs** and represented the dev team in **weekly leadership meetings**, driving cross-functional decisions with Product and leadership.

OOZOU Oct 2021 – Aug 2025
Lead Mobile Developer *Bangkok, Thailand*

- Led a 6-developer** mobile team (React Native + iOS); owned hiring, career development, and team performance strategy.
- Architected a greenfield React Native app now serving **525k MAU** at **99.59%** crash-free.
- Owned **CI/CD** pipelines (GitHub Actions, Bitrise, Fastlane), automating deployment and accelerating release cycles.
- Drove team adoption of coding standards and engineering practices, reducing technical debt across the codebase.
- Contributed across the stack (**NextJS, NestJS, MS SQL**); delivered Swift-based iOS features and mentored the broader team.

Siam Commercial Bank Aug 2019 – Sep 2021
Mobile Developer *Bangkok, Thailand*

- Led a team of 20 developers, including a mobile frontend squad, to develop and enhance mobile banking applications with over **1M daily active users**, using React Native.
- Frontend **squad lead of 7 mobile developers** for multiple projects, upskilling them in React Native, Flutter, and Swift, achieving full team readiness in 2–4 weeks.
- Directed agile ceremonies and ensured alignment with client requirements for timely product releases.

- Developed features with unit testing in Swift, achieving KPIs of 99% crash-free users and **reducing technical debt by 40%**.

RingZero Game Studio

June 2018 - July 2019

C# Unity Developer

Bangkok, Thailand

- Developed **core gameplay** systems and UI components for a mobile tower defense game, contributing to its release build and internal testing.
- Supported the **iOS** release process, including working with provisioning profiles and certificates, gaining hands-on experience in mobile deployment pipelines.
- Worked on a first-person puzzle escape game (**PC/Console**), designing and implementing **gameplay** features and core systems such as **camera** control, puzzle mechanics, and player interaction.
- Developed racing gameplay logic and camera/vehicle systems in **Unity**.

EDUCATION

Sirindhorn International Institute of Technology

2018

B. Eng | Computer Engineering (AI, Machine Learning, Information Retrieval)

Bangkok, Thailand
